Project description

In Cordoba, in the cull de sac south of the river a new conference building, in combination with a five star hotel and retail space has been developed. The architect, O.M.A., won a competition organized by the city of Cordoba. The design shows a long stretched building with attached auditoria. The exhibit spaces connect the hotel area to the conference area. Besides conferences, the building also is designed for cultural events for Cordoba visitors.

Acoustically interesting spaces are the main auditorium with 1500 seats, the small auditorium with 500 seats, rehearsal rooms, hotel rooms, offices, retail space and a foyer. The auditorium will be a multi functional space, allowing for use as conference space, without being restricted to that single use. The auditorium will; also serve as house for the Cordoba Orchestra, as a result of which good acoustic conditions for symphonic music are also required. These standards require specific solutions.

The DD is completed.
