

## Foley Studio

Bruxelles, Belgium

### Client

Studio l'Équipe

### Architect

none

### Acoustics

Level Acoustics

### Realization

2008

## Project description

Studio l'Équipe in Brussels houses several movie production studio's. One of the studios, Studio B3, is used as a Foley Recording Studio, where voices and sound effects are recorded. From the experience of many engineers, the room acoustics of the B3 studio did not fulfil the requirements for making good foley recordings. A new room acoustical design is made for the studio.

To be able to redesign the acoustical treatments of the studio, the room acoustical requirements need to be clear. These requirements were not very straightforward, since there is few literature about Foley Studio design, also because there are few foley studios. To determine the right room acoustical requirements, an other foley studio is investigated and compared to the B3 studio. This other studio, studio -2, has a good acoustical reputation and has serves as an example.
